Product Structure

Although wood shingles, slate, tile, metal, and a host of other materials can be used to surface house roofs, asphalt stands out as the roofing material of choice because it is relatively affordable, easy to apply, fire-resistant, comparatively lightweight, available almost every-where, and durable enough to last for 15 to 40 years.

In the past, uninteresting appearance was the biggest strike against asphalt roofing-it just didn't offer the visual interest and charm of classic materials such as wood and tile. But things have changed.Today, asphalt shingles are sold in many textures, grades, and styles that are reasonably convincing at mimicking the look and character of traditional materials.
