## Stone Coated Metal Roofings

[WWW.THETOITURE.COM](http://WWW.THETOITURE.COM)

# Why Only Toiture?

➤ **50 Years Warranty**

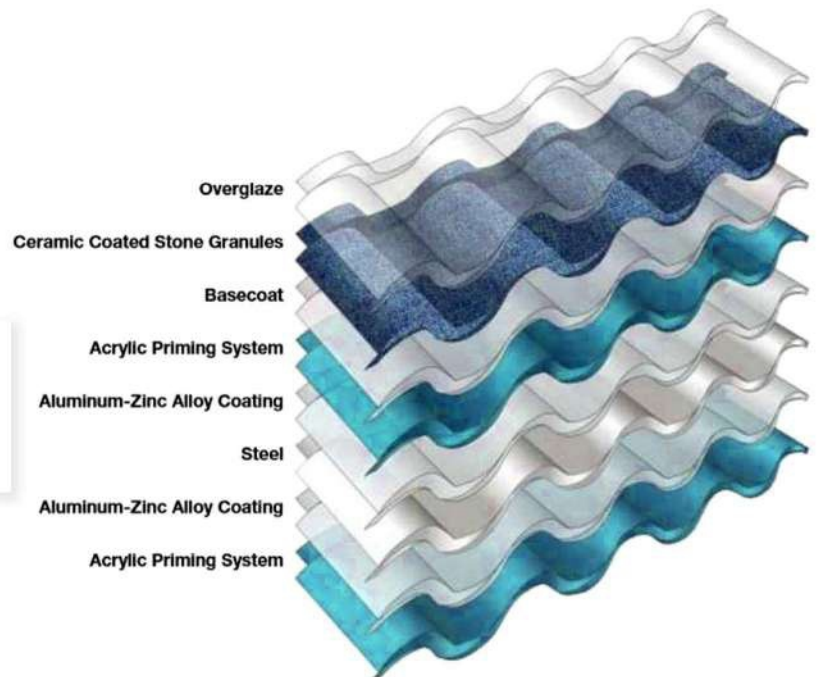

➤ **Saves Energy upto 97%**

➤ **Anti-Rust Product**

## Product Structure

To find our specific sauce beyond our 50 years warranty

1. The protective layer of aluminum-zinc (55% aluminum, 43.4% zinc and 1.6% silicon) on the steel body.
2. Beautiful basalt stone chips with high-temperature treated.

## More Benefits

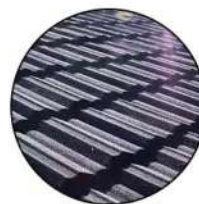

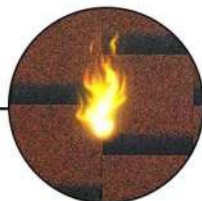

### Thermal reactivity

The galvanized steel sheet has a high heat reflectivity, which is twice that of the galvanized steel sheet. It is composed of a base steel sheet and natural stone particles, so it can suppress the rapid rise in temperature in summer.

### Lightweight

Because the density of 55% AL-Zn is lower than that of Zn, the area of galvanized steel sheet is more than 3% larger than that of coated steel sheet with the same weight and the same thickness of the gold plating layer.

### Economical

In the construction of the building roof, there is no need to remove any roofing materials, and it can be directly constructed

### Flame retardant

Class A fireproof material, in case of fire, it will not spread the fire, and it is safe to use.
